

## Discover the RAK-2

The RAK-2 Intelligent Rack Adapter takes the foundation of an RFC-1 and extends it into the connected world. The RAK-2 features a wired Ethernet connection with a built-in network interface and web server.

The remote control system gains network connectivity while maintaining the traditional RFC-1 voice mode interface. Both voice and data interfaces are included as part of the standard device.

The RAK-2 includes an updated, enhanced version of or RFC-1 remote facilities controller at its core. It also includes our Setup Tool 6 software for setting up the embedded RFC-1 controller.

The RAK-2 is a drop-in replacement for existing RFC-1 installations. This protects the investment in RP-8 relay panels and leaves the existing RFC-1 system wiring intact.

## Network Communications

Internet connectivity gives the RAK-2 new capabilities that make the Remote Facilities Controller family of devices more effective at communicating with you than ever before.

- System readings can be viewed with a web browser
- System readings can be delivered by email or text message
- Alarm notifications can be made by email or text message

## Surge Suppression

The RAK-2 has protection circuits on the telephone line to suppress damaging electrical spikes from the telephone line before they can harm the system. We recommend installing an SP-8/TO Heavy Duty Surge Protector on each RP-8 to protect the telemetry inputs from damaging spikes.

## Web Interface

The built-in web server collects telemetry data from the embedded RFC-1 controller and displays that data in an attractive, efficient interface that is available from any device that can browse the web.

 Sine Systems, inc

## System Configuration

At least one RP-8 Relay Panel is required for any RAK-2 installation. If the RAK-2 is installed as an upgrade to a previously functioning RFC-1 system then an RP-8 is already in service. Otherwise, RP-8s are ordered separately.

Each RP-8 provides eight channels of telemetry and control I/O to the system. Up to eight relay panels can be connected to a system.

## Pricing and Availability

RAK-2 systems are available now. Complete details and pricing are available at [www.sinesystems.com](http://www.sinesystems.com).
